CMS PILOT API

A 360° view of your patients' history

As patients move throughout the healthcare system, providers often struggle to gain and maintain a complete picture of their medical history. Data at the Point of Care fills in the gaps with claims data to inform providers with secure, structured patient history, past procedures, medication adherence, and more.

DATA AT THE POINT OF CARE

- Analytics
- Documentation
- Security
- Testing

MODERNIZING MEDICARE

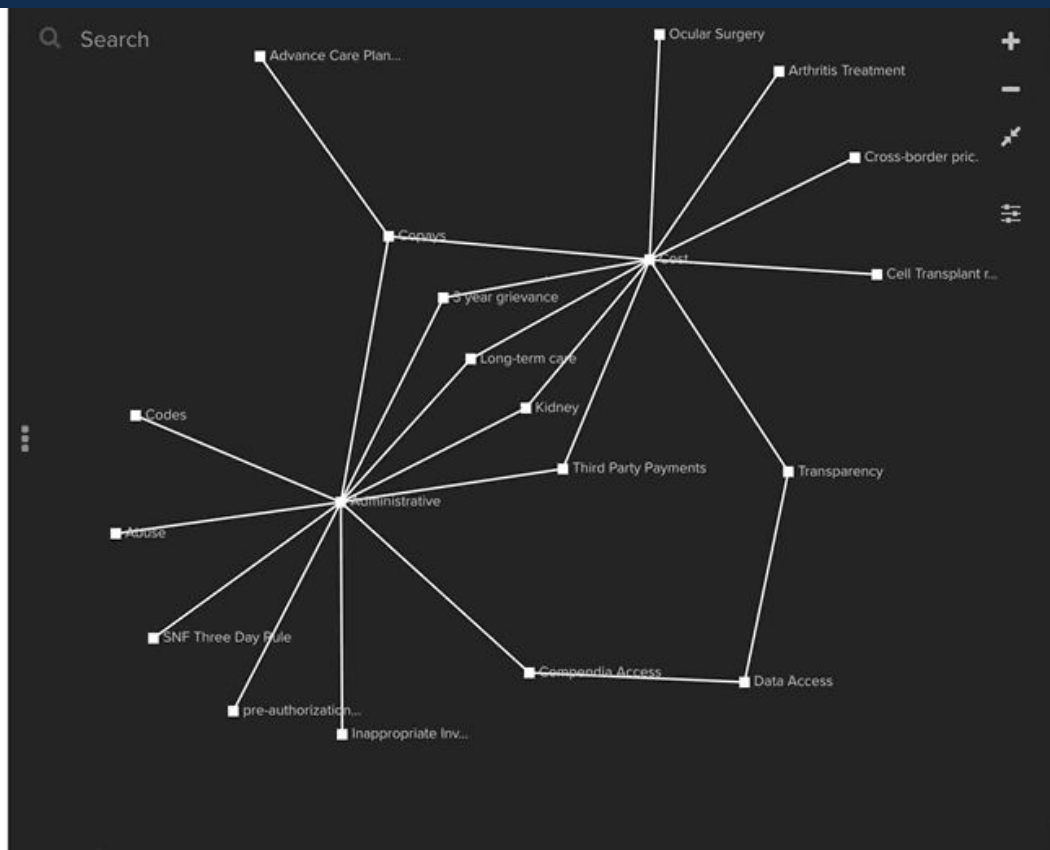

- What is it?
- Health claims data comments
- Themes moving forward

MODERNIZING MEDICARE

...
The map shows two main expected themes of the data: administrative and cost-based. Each theme has several specific themes that fall under with more detailed explanations to exemplify their relevance. Some themes are connected to both cost and administrative as an improvement would need to be made to both to alleviate the pain point.
